

Remote Patient Monitoring (RPM)

The future of Virtual Care is Here and Now

Remote Patient Monitoring (RPM) uses technology to Track Patient physiological Data outside the walls of the healthcare settings through connected care. From where ever the elder person(s) stays, home, Assisted living home, long term facility , beach, vacation, patients data is seamlessly integrated into the software platform supported by a call center. High risk and high touch individuals are taken care with personalized alerts and responses.

Tapasvi has partnered with leading RPM vendors to provide state of art service to improve your revenue, provide proactive care, and allow patients to use technology to improve health outcomes.

End-to-end Solution

Also Offer Platform & Devices

The Financial Impact of RPM to Practice

	Total Patients	2500
	50% Medicare	1250
